# VARIETAL INNOVATION AND STONE FRUIT PRODUCTION

We are experts in **varietal innovation and stone fruit production**, with peaches, flat peaches, apricots and nectarines being the main varieties we work with. Moreover, we also produce new varieties such as the flat nectarine, the cherry, the plum and even the Cherry Plum.

Our work consists in: hybridization, selection, behaviour study, protection of our varieties, marketing and production.

Our research focuses on many criteria: **organoleptic quality of fruit**, colour, size, ripening time, as well as **disease resistance** (sharka, monilia, powdery mildew, xanthomonas, etc.), and adaptation to weather conditions, to the soil, etc.

Our strength: Being a hybrid breeder and producer. Thanks to this we know the limitations of producers, while the demands of the market allow us to search for and create adapted varieties from planting to distribution.
